FOR IMMEDIATE RELEASE

September 15, 2016

(Green Bay, WI) [GLC Minerals](http://www.glcminerals.com), a custom mineral processing facility, has received the [American Feed Industry Association's](http://www.safefeedssafefood.org) Safe Feed/Safe Food Certification. Those receiving certification must meet comprehensive standards that go beyond the existing regulations in the U.S. Food Safety Modernization Act of 2010. The law requires all food, feed, ingredient, and pet food facilities to identify food and feed safety hazards and develop written guidelines to control them.

The [Safe Feed/Safe Foods Certification](http://www.safefeedssafefood.org) requires companies to meet additional stringent stipulations. Certification is determined by an independent audit of GLC Mineral's manufacturing processes.

"In many cases, our guidelines exceed federal regulations in areas like employee training, feed manufacturing, product traceability and facility management," said GLC Minerals President and COO, Holly Bellmund. "By complying with the Safe Feed/Safe Food certification requirements, we know we are going the extra mile to ensure the safety of our product. Achieving Safe/Feed/Safe Food Certification is good for us as a company, good for our customers, and good for animals and consumers."
